Welcome to the EBSCOhost interface overview. In this tutorial, we will look at the EBSCOhost searching interface as well as features including: search modes, article and image preview via mouseover, the result list, and the enhanced preferences options.

When logging into the EBSCOhost interface, you will first notice a clean Basic search screen. Also, you will find the authority files (**Subjects, Publications, & Images**) at the top of the EBSCOhost screen. You can click on these to search individual publications, thesauri, image collections, and more. If at any time during your session you wish to return to the basic search screen, simply click the **Basic Search** link below the **Find** field. You can add or change databases being searched by clicking the **Choose Databases** link above the **Find** field.

SmartText Searching allows you to enter a large amount of text to the Find field, or even an entire page. Using a sophisticated algorithm, SmartText searching examines the text, places a weight on the search terms, and returns a result list based on relevancy. Note the expanded **Find** field which accommodates more text.

Title: Global Warming, Human Population Pressure, and Viability of the World's Smallest Butterfly.

Source: Conservation Biology

Date: 2005

Subjects: GLOBAL warming, CLIMATIC changes, POPULATION, ...

Abstract: The effects of climate change and habitat destruction and their interaction are likely to be the greatest challenge to animal and plant conservation in the twenty-first century. We used the world's smallest butterfly, the Sinai baton blue (*Pseudophilotes sinaicus*), as an exemplar of how global warming and human population pressures may act together to cause species extinctions. We mapped the entire global range of this butterfly and obtained extensive data on the intensity of livestock grazing. As with an increasing number of species, it is confined to a network of small habitat patches and is threatened both by indirect human-induced factors (global warming) and by the direct activities of humans (in...
