Online Journal Archives

Taylor & Francis Group has embarked on a project to digitise its backfile collections back to Volume 1 Issue 1 by key subject area.

Journals falling under the company's 3 imprints; Taylor & Francis, Routledge and Psychology Press, will be digitised and released over the coming months. This will allow your library to strengthen its collections of scholarly information available to your researchers, whilst saving valuable shelf space and costs.

Flexible pricing options are available to suit every budget. Should your library wish to purchase by annual subscription, but want the security of perpetual access to the content, once the spend on the archive reaches 125% of the outright purchase cost for that year, your library will automatically have purchased the collection for a one-time fee and only the maintenance fee will be due.

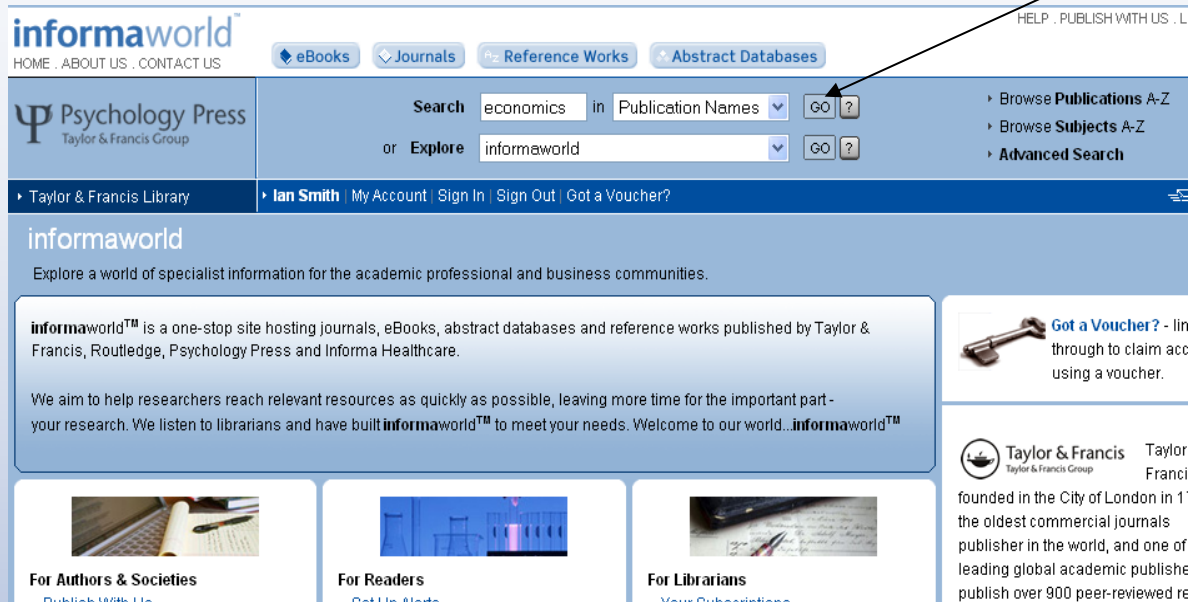

Please follow the links below for details on our archive collections. For further information on these archives, please contact [taylorandfrancis.com](#)

Abstract

People who understand the natural behavior patterns of farm animals will be able to handle them more easily. This will help reduce stress, improve animal welfare, and reduce accidents. Common domestic animals such as cattle, sheep, pigs, goats, poultry, and horses are prey species of grazing or foraging animals. Their wild ancestors survived in the wild by flight from predators. This is why domestic animals today are easily frightened by potentially threatening stimuli such as sudden movement. It is important to handle animals calmly; calm animals are safer and easier to handle than excited ones. If an animal becomes agitated, it is advisable to let it calm down for 20 to 30 minutes.
